QuickPatch H2O™

As a manufacturer of pavement maintenance products (since 1945), in 2022 we decided to use our lab, contractor team and supplier network to create a permanent, water activated and eco-friendly pothole patch that would match the performance of what is on the market…at a **BETTER VALUE**!

It's now 2025 and the jury is in – we did it. QUICK PATCH H2O has been tested via a certified lab AND in potholes … it has stood the test of time. QUICK PATCH H2O is extremely durable and outperforms competition when working in colder temps and more stable after exposure to water. Easy to work with and sets up immediately.

We look forward to growing the QUICK PATCH H2O network with contractors, municipalities, DOTs, etc. please shoot us a note if you'd like to become a distributor or order a pallet.

The ONLY water activated patch that is 100% developed, sourced and made in the USA

Testimonials

I had cracks, gaps, and sunken areas to patch. Did not expect the product to actually stay in place but to my surprise it did! A year later and it's still holding in place. Highly recommend. PS- I've been in construction for over 30 years and would recommend this stuff to everyone. Joe

Works great!! Good compacting. And adhesion. I loosened it up by instructions. However, I spread compacted watered and compacted again. I'm impressed. Raymond H.

Saved a driveway replacement of $6K-8K: Traditional asphalt repair products are for pothole repair only for areas of 2'x2'. Quick Patch can repair potholes and edges. If not for this product, I would have to replace the driveway, due to enough liner foot edge damage. Driveway may last another few years now. Quick patch is easy to use, a bit pricey, but less expensive than competitor's offerings for similar product. Dan L.

Easy to install - probably would have been easier to manipulate on a really hot day. Finished work looks like a patched pothole on the street.

Very pleased with product. Simple instructions. I created a curb in front of my plant bed after street was replaced and curb was damaged. Worth it!

This cold patch repair works well, especially for the price point. The better brand that comes in an orange bucket is much more expensive than this product, but this works about as well. Preparation and not having too much water added are key. Check the weather! It's a chemical reaction with water that activates the hardening process. If there's too much water added, it won't set up right; just like concrete/cement. Easy to work with since I get to choose when to add the water. VAL Landscaping

Definitely recommend: The product worked great. It was so easily to apply.

I was able to fill the space between my driveway...I was able to fill the space between my driveway and newly installed cobble stones. It worked even better than I expected. Hope it holds up during the winter months. Brian L.
